Press release (01/2016)

UNIQEY

UNIQEY – Individual keyboards, made in Germany

With the brand new UNIQEY Q100 keyboard and the online keyboard designer, two interesting topic areas are coming together in July 2016. The result is a high-quality mechanical PC keyboard that, together with the UNIQEY keyboard designer, offers previously unheard-of opportunities for customisation.

The online designer enables the user to create an individual piece to suit his personal taste and usage habits. The wide range of different colours, materials and additional functions is the basis for extensive customisation with over 3,000,000 possible configurations.

What is more, the UNIQEY Q100 keyboard offers discerning users plenty of scope for catering to personal usage habits in terms of software, too. For instance, the keyboard can control up to three additional devices via Bluetooth® besides the connected PC or notebook. As part of the UNIQEY expert features, it is also possible to assign often-used shortcuts to various keys, as well as alter other detailed settings.

In addition, the UNIQEY Q100 keyboard is characterised by top-quality materials and components. Besides a rugged housing made of premium anodized aluminium and MX key modules, keycaps with extremely durable key legends (double-shot keycaps) are also used. The optional QMX damping element also enables a noticeable reduction in key noise. Particularly in noise-sensitive environments, such as in open-plan offices, the QMX clip thus helps to make background noise much more pleasant.

All keyboards are manufactured and tested individually in the UNIQEY keyboard factory. The carefully selected materials guarantee a long service life and an exceptional writing experience, and make the Q100 keyboard a reliable companion for all users who spend a lot of time on a PC, whether at home or at work.
